

I fully support this petition for the following reasons. With more activity on 160m, and the prospect of additional interest as the sunspot cycle becomes more dormant, the opportunities for contention and need for further FCC action will only increase unless the digital boundaries are made clear, just as they are on other bands. The "gentlemen's agreement" in place currently will not continue to be viable as new users who are not familiar with it begin to operate on 160m. If the band is segmented as this petition describes, it will provide documented guidance to users and clear regulatory boundaries should enforcement be required.
